</tbody>
</table>

**RMI < 200**

- Postmenopausal
- More than 5 cm in diameter
- Non-simple cysts
- Bilateral
- Symptomatic
- Multilocular
- sCA<sub>125</sub> < 35 u/ml

**RMI > 200**

- Postmenopausal
- Malignant
- sCA<sub>125</sub> > 35 u/ml
- History of breast or ovarian cancer

**RISK OF MALIGNANCY**

- **LOW**
  - Follow-up in 4-6 months
- **HIGH**
  - Surgical evaluation
  - Oncological evaluation

*Risk of Malignancy Index (RMI) is calculated to determine the risk of an ovarian mass being malignant in order to choose adequate treatment approaches.*

\[
\text{RMI} = U \times M \times sCA_{125}
\]

- U = ultrasound findings
- M = menopause status
- sCA<sub>125</sub> = ovarian cancer marker
